TEST & MEASUREMENT

Overview

SKS develops and manufactures connectors for a wide range of applications. Our portfolio includes circular connectors, overmolded connectors and special connectors. Due to our 25 years of experience and the high manufacturing depth we are able to produce a wide variety of connectors according to your special requirements and expectations with regard to mechanical, electrical and, for example, also climatic factors.

CONNECTORS

You need a potted distributor with the IP67 or higher protection class, which also has different inputs and outputs? SKS will work with you to define the right solution. No matter if you need a new housing design according to your specifications or if you need an economical solution for small and medium quantities - SKS draws on years of know-how and experience from many successful products and components. Depending on the application we use different materials (plastic, zinc, aluminum, stainless steel) and combine them as housing material with the required connectors e.g., as M23, M12, M8 and also M5. We pack your electronics with proven 2k-PUR potting system tightly and protected. Marked with your logo and the necessary technical data, we deliver a product ready for sale.

DISTRIBUTORS

TEST & MEASUREMENT

With our Hirschmann Test & Measurement brand, we provide a branded product that has a large variety of touch-protected test leads and measuring accessories according to IEC61010.

The quality standard is the basis for us and for you an investment in proven product quality for a long product life.

SPECIAL SOLUTIONS

Special solutions are needed for special applications. SKS realizes such solutions with a variety of manufacturing technologies, from punching of contacts to electronic testing in the production process.

Our core competence includes the development and production of components and complete devices, as well customer-oriented consulting and professional project management from the specification phase to market launch. The SKS Kontakttechnik GmbH is your partner for the realization of your product from the idea to series production.

All necessary technologies for engineering, design, prototype production and manufacturing of electromechanical components and systems are available in our company. Based on more than 5 decades of research and development in the field of contact technology, we provide you with innovative solutions from a single source for a variety of applications in a wide range of industries.
